The Introduction of A

PERSONAL IMMUNIZATION CARD

Developed by the Committee on Control of Infectious Diseases of the Academy, the billfold-size plastic card provides a permanent and readily available record of immunizations children have received. The card will assist parents to recall at a glance whether their child has been immunized against polio, smallpox, measles, diphtheria and tetanus.

Space is also provided to record blood type, special problems, significant history of sensitivities, tuberculin tests, and other special vaccinations.

The record will also be valuable to public health agencies, schools, camps, etc., especially during epidemics, to show at a glance which children are protected.

Each card is inserted in a 2½ × 5½″ disposable holder; instructions for using the immunization card are printed on the holder.

Available from: The American Academy of Pediatrics
